AB - JP2004255029 NOVELTY - The portable terminal (5) comprises a biological information measurement device which includes an electrode (8) for heart-rate and electrocardiogram measurement, image pickup device (6) for photographing eyeball of user, microphone (7) for acquiring oral information from user or sensor (9) for detecting body temperature.
- DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for health-care support system.
- USE - In health-care support system for use with medical institution.
- ADVANTAGE - Early detection and thus prevention of sickness in user is achieved.
- DESCRIPTION OF DRAWING(S) - The figure shows the front and side views of the portable terminal.
- portable terminal 5
- image pickup device 6
- microphone 7
- electrode 8
- sensor 9
